"Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist

and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling, well documented, clear narratives that convey their work honestly and in proper context, they have succeeded admirably." Veterinary Pathology, July 2009 "[The book is] clearly written, has a logical step-by-step structure, is easy to read and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing." Aquaculture International, April 2009 Writing Scientific Research Articles: Strategy and Steps guides authors in how to write, as well as what to write, to improve their chances of having their

articles accepted for publication in international, peer reviewed journals. The book is designed for scientists who use English as a first or an additional language; for research students and those who teach them paper writing skills; and for early-career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments, as well as ideas for developing discipline-specific English language skills for manuscript writing.

The book is designed for use by individuals or in a class setting. Visit the companion site at www.writeresearch.com.au for more information.

This revision of Bloom's taxonomy is

designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational

Excerpt from Check-List of Birds of the World, Vol. 12: A Continuation of the Work of James L. Peters;
Pachycephalinae Aegithalidae,
Remizidae, Paridae, Sittidae, Certhiidae,

Rhabdornithidae, Climacteridae, Dicaeidae, Nectariniidae, Zosteropidae, Meliphagidae This is the fourth volume to be published as a cooperative project after the death of J. L. Peters in 1952. Some manuscripts for this book were completed nearly ten years ago and have been revised several times to keep them up to date. This delay and extra effort is regretted, but it should be remembered that the Six collaborators had varied commitments, and it was impossible for some authors to complete their sections as promptly as others. It is anticipated, however, that as the Checklist series nears completion, the time between the submission of a manuscript and its publication will decrease, and that the rate with which new volumes appear will accelerate.
