JOSIAH EMILIANO

Policy-Making in a Transformative State Springer
 Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we re teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

The Modern Life Arithmetics Macmillan

This volume tracks the complex relationships between language, education and nation-building in Southeast Asia, focusing on how language policies have been used by states and governments as instruments of control, assimilation and empowerment. Leading scholars have contributed chapters each representing one of the countries in the region.

The Operation of the Japanese Electoral System since 1994

Where Darwin Meets the Bible provides an account of the lasting conflict between creationists and evolutionists.

The Common Sense of Commercial Arithmetic Macmillan International Higher Education

The official organ of the North Central Association of Colleges and Schools (called earlier North Central Association of Colleges and Secondary Schools).

Indigenous Evangelists and Questions of Authority in the British Empire 1750-1940 Springer Nature

The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographic index. 28 photographs and illustrations - mostly color. Free of charge in digital PDF format.

For Engineering and Science Springer

Do you need to improve your confidence in maths? Does your maths need to be refreshed and refocused for engineering or science? Are there some elements of school maths you have

forgotten or never quite mastered? With clear explanations, lots of examples and a friendly, encouraging style, Fundamental Maths is a short, easy-to-follow textbook that makes maths accessible and manageable for all. Written for students entering HE or FE courses in engineering or science, the author covers all the core topics and breaks them down into easily digestible chunks, keeping explanations clear and concise throughout. Put past anxieties about maths or gaps in your knowledge behind you!

The Elements of Arithmetic in Theory and Practice

Macmillan/McGraw-Hill Math: Teacher ed., v. 2 Macmillan Mcgraw-Hill Math Leveled Problem Solving, Grade 3

This major new textbook introduces students to one of the most important fields of political science. Written by key international experts, Comparative Politics includes a wide range of countries, and covers methods and theories; the nation-state and its institutions; actors and processes; and policies. It also deals with recent changes such as globalisation and democratisation in Africa and the Middle East. The chapters are enhanced by innovative learning features, and a cutting-edge Online Resource Centre accompanies the text. Online Resource Centre Student resources: Interactive map with country profiles for a wide range of countries Review questions, exercises and test bank Extra figures, tables, maps and documentation Glossary with comprehensive A-Z dictionary of key terms in comparative politics Instructor resources: PowerPoint slides Essay and exam questions Multiple choice questions Figures and tables from the book Resources for research: Comparative data in different formats for around 200 countries and 200 indicators Web directory of statistical, institutional and information resources

First Fruits Macmillan International Higher Education

This book explores, in a series of detailed case studies, how public policy is actually made in Qatar. While Qatar is a Gulf monarchy, its governance is complex. Other analysts have tried to come to grips with this complexity using qualified descriptions of the system such as 'late rentier,' 'pluralized autocracy,' 'tribal democracy,' or 'soft authoritarian.' The authors of the volume use the lens of a transformative state. Qatar is deliberately engaged in a rapid process of radical economic and societal transformation. That process has its contradictions and tensions, particularly with regards to achieving a balance between Islam, social traditions, and modernity. This book explores how it also has a specific policy dynamic of generating ideas and institutions, developing policy and program designs, implementation and coordination.

Extensively Annotated Bibliography and Sourcebook Oxford University Press, USA

Discrete Mathematics for Computing presents the essential mathematics needed for the study of computing and information

systems. The subject is covered in a gentle and informal style, but without compromising the need for correct methodology. It is perfect for students with a limited background in mathematics. This new edition includes: • An expanded section on encryption • Additional examples of the ways in which theory can be applied to problems in computing • Many more exercises covering a range of levels, from the basic to the more advanced This book is ideal for students taking a one-semester introductory course in discrete mathematics - particularly for first year undergraduates studying Computing and Information Systems. PETER GROSSMAN has worked in both MA26 and industrial roles as a mathematician and computing professional. As a lecturer in mathematics, he was responsible for coordinating and developing mathematics courses for Computing students. He has also applied his skills in areas as diverse as calculator design, irrigation systems and underground mine layouts. He lives and works in Melbourne, Australia. *Macmillan/McGraw-Hill Math: Teacher ed., v. 2* Springer The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographical index. 300 photographs and illustrations. Free of charge in digital PDF format.

This book explores the ways in which Blake reacted to the subcultures of his day, as well as how he has inspired popular, modernist and postmodernist figures until the present day. Blake's influence on later generations of writers and artists is more important than ever, extending into film, psychology, children's literature and graphic novels.

The Athenaeum National Academies Press

The coming of colonialism to Sub-Saharan Africa generated many forces that historians often describe in abstract terms: peasantization, leadership, nationalism and even colonialism. Such terms often hide or overwhelm the individual experiences of those who, in some way, contributed to the development and demise of colonial Africa. These 'agents' of empire - intellectuals and peasants, chiefs and ex-slaves, nationalists and colonial officials - symbolise the ambiguities of and limitations on colonial power. Agency and Action in Colonial Africa attempts to capture their role.

Book[s] One[-six] (six Book Series) Springer

This book explores the role of television in the 1950s and early 1960s, with a focus on the relationship between Tories and TV. The early 1950s were characterized by recovery from war and high politics. Television was a new medium that eventually came to dominate mass media and political culture. But what impact did this transition have on political organization and elite power structures? Winston Churchill avoided it; Anthony Eden wanted to control it; Harold Macmillan tried to master it; and Alec Douglas-Home was not Prime Minister long enough to fully utilize it. The Conservative Party's relationship with the new medium of television is a topic rich with scholarly questions and interesting quirks that were characteristic of the period. This exploration examines the changing dynamics between politics and the media, at grassroots and elite levels. Through analysing rich and diverse source materials from the Conservative Party Archive, Anthony Ridge-Newman takes a case study approach to comparing the impact of television at different points in the party's history. In mapping changes across a thirteen year period of continual Conservative governance, this book argues that the advent of television contributed to the party's transition from a membership-focused party to a television-centric professionalized elite.

This book presents a comprehensive overview of recent developments in production planning. The monograph begins with an introductory chapter reviewing the need for these production planning models, that operate by determining time-phased releases of work into the facility or supply chain, relating these to the Manufacturing Planning and Control (MPC) and Advanced Planning and Scheduling (APS) frameworks, that form the basis of most academic research and industrial practice. The extensive body of work on Workload Control is also placed in this context,

and proves the need for improved models with a discussion of the difficulties, these approaches encounter. The next two chapters present a detailed review of the state of the art in optimization models based on exogenous planned lead times, and examines the cases where these can take both integer and fractional values. The difficulties arising in estimating planned lead times are consistent with factory behavior which are highlighted, noting that many of these lead to non-convex optimization models. Attempts to address these difficulties by iterative multimodel approaches, that combine simulation and mathematical programming, are also discussed in detail. The next three chapters of the volume address the set of techniques developed using clearing functions, which represent the expected output of a resource in a planning period, as a function of the expected workload of the resource, during that period. The chapters on this subject propose a basic optimization model for multiple products, discuss the difficulties of this model and some possible solutions. It also reviews prior work, and discuss a number of alternative formulations of the clearing function concept with their respective advantages and disadvantages. Applications to lot sizing decisions and a number of other specific problems are also described. This volume concludes with an assessment of the state of the art described in the volume, and several directions for future work.

As marketisation and privatisation reshape the criminal justice system, this illuminating overview sets out their causes, scale and impacts. With case studies and economic, sociological and criminological perspectives, leading academics consider the evolving roles of public, private and voluntary sectors and possible future reforms.

The Tories and Television, 1951-1964 Springer

This is a comprehensive guide to contemporary research design in Political Science introducing a wide range of cutting-edge research models and examining their respective implications.

Discrete Mathematics for Computing Springer Nature

The volume is at the forefront of the academic and policy debates on effective labour regulation, offering innovative approaches to research and policy. It is an interdisciplinary response to the central challenges that face modern labour regulation and draws on contributions by leading experts in a range of disciplines.

Creationists and Evolutionists in America Macmillan International Higher Education

A quick, step-by-step guide to developing the practical negotiating skills that every business manager needs. The authors cover preparation, strategy development, getting started, building understanding, bargaining, and closing the deal. Managers learn effective tools for negotiating within their own groups, including organizing successful meetings and techniques for building consensus. What are the Most Common and Costly Mistakes Made by Ineffective Negotiating and How Can These Mistakes be Avoided? What are the Underlying Principles and Stages Which Govern the Negotiation Process? How Should We Manage Interpersonal Negotiations and What Are the Strategies and Tactics Used by Effective Negotiating Teams? What are the Different Approaches to Multi-Party Negotiations and Which Approach is Most Effective for Negotiating Across Cultures? The Essence of Management Series is an invaluable reference source for managers on short courses; for MBA and undergraduate students who want to get quickly to the heart of the subject; and as reference material for managers and aspiring managers wishing to improve their knowledge and skills.
