An Input-output Model of  
a Recreation-oriented  
Economy Routledge

The papers in this volume  
analyze the deployment  
of Big Data to solve both  
existing and novel  
challenges in economic

measurement. The  
existing infrastructure for  
the production of key  
economic statistics relies  
heavily on data collected  
through sample surveys  
and periodic censuses,  
together with  
administrative records  
generated in connection

with tax administration.  
The increasing difficulty of  
obtaining survey and  
census responses  
threatens the viability of  
existing data collection  
approaches. The growing  
availability of new sources  
of Big Data—such as  
scanner data on

purchases, credit card transaction records, payroll information, and prices of various goods scraped from the websites of online sellers—has changed the data landscape. These new sources of data hold the promise of allowing the statistical agencies to produce more accurate, more disaggregated, and more timely economic data to meet the needs of policymakers and other data users. This volume documents progress made toward that goal and the challenges to be

overcome to realize the full potential of Big Data in the production of economic statistics. It describes the deployment of Big Data to solve both existing and novel challenges in economic measurement, and it will be of interest to statistical agency staff, academic researchers, and serious users of economic statistics.

What is a durable economy? It is one that not only survives but thrives. How is it created,

and what does it take to sustain over time? Sustainable Communities provides insight and answers to these questions. Citing Burlington, Vermont's remarkable rise to award-winning status, this book explores the balance of community planning, social enterprise development, energy and environment, food systems and cultural well-being. Aimed at policymakers, development practitioners, students, and citizens, this book

describes which and how multiple influences facilitate the creation of a local, durable and truly sustainable economy. The authors hope to inspire others by sharing this story of what can be done in the name of community economic development.

*Building the Green Economy* Mit Press

This book is open access under a CC-BY license. The importance of the pharmaceutical industry in Sub-Saharan Africa, its claim to policy priority, is rooted in the vast unmet health needs of the sub-

continent. Making Medicines in Africa is a collective endeavour, by a group of contributors with a strong African and more broadly Southern presence, to find ways to link technological development, investment and industrial growth in pharmaceuticals to improve access to essential good quality medicines, as part of moving towards universal access to competent health care in Africa. The authors aim to shift the emphasis in international debate and initiatives

towards sustained Africa-based and African-led initiatives to tackle this huge challenge. Without the technological, industrial, intellectual, organisational and research-related capabilities associated with competent pharmaceutical production, and without policies that pull the industrial sectors towards serving local health needs, the African sub-continent cannot generate the resources to tackle its populations' needs and demands. Research for

this book has been selected as one of the 20 best examples of the impact of UK research on development. See <http://www.ukcds.org.uk/the-global-impact-of-uk-research-for-further-details>.

Political Economy and Agrarian Governance in British India St. Martin's Griffin

This report presents findings from a study of the local-economy impacts of one of Lesotho's largest social programmes, the Child Grants Programme (CGP),

and a rural development intervention, the Sustainable Poverty Reduction through Income, Nutrition and Access to Government Services (SPRINGS) programme. The CGP provides cash transfers to eligible poor households, while SPRINGS was a multi-faceted productive intervention targeting areas reached by the CGP, that provided support in various forms. The study is part of a larger project - a partnership between FAO, IFAD and the Universidad

de los Andes (UNIANDES) and its Centro de Estudios en Desarrollo Económico (CEDE) - that seeks to identify factors that lead to better articulation between social protection interventions and rural productive inclusion strategies.

**Sustainable Communities** University of Chicago Press  
Apple, Starbucks, Amazon, Zara, McDonald's - these are some of the brands and companies that are at the forefront of today's global economy. They are

embedded in virtually every city and town. But when the global economy goes wrong (as in 2008), it can leave local communities vulnerable in the form of unemployment and bankruptcy. This forward-looking book argues for the creation of local economies as a means of resisting the seismic changes that globalization often brings, especially in times of crises. Moreover, research shows that for every GBP100 spent in a local shop, 45% will remain in the community

(compared with only 15% if spent in retail chains such as Tesco or Aldi). As part of the design of the future, Elmark argues for the need to break up the global economy into local economies, so that communities can regain their independence and be less exposed to the tide of globalization.

**Deep Economy** Lulu Press, Inc

While previous research on cash transfer programs has primarily concentrated on micro-economic effects, this paper analyzes general

equilibrium effects of social transfer policies using a computable general equilibrium model applied to Cambodia. It identifies the potential impact of these transfers on the local economy, looking particularly at prices and market responses to an increase in demand through production and trade. Our findings show that, for goods and services for which domestic supply is not elastic enough to respond to a significant rise in demand, prices will increase, affecting the

value of transfers on poverty reduction. Wise Fool Press While national trends shape the general economic context for growth, industrial performance also depends critically on conditions particular to local areas. This book develops the idea that the interaction between business strategies and local economic environments has a substantial influence on the success or failure of local mature industries. Arguing that the poor

performance of local economic development policies--measured by their ability to stimulate investment, create jobs, and expand the tax base--can be improved through a better understanding of this interaction, the authors stress the importance of identifying and promoting invisible factors, such as worker attitudes and small-scale entrepreneurship, in development strategies for mature industries. They document their findings through statistical models and

micro-studies in a local economy they use as a case--the Montachusett region of central Massachusetts--and argue that it is better to replace traditional policies of tax breaks and subsidies to business with a comprehensive local growth strategy targeted at specific firms that can take advantage of the invisible factors in economic development. *The Political Economy of Industrializing for Local Health Food & Agriculture Org.* The history of China dates

back thousands of years, with periods of decline followed by periods of growth and innovation. This book puts the last 50 years - China's most recent period of growth - into perspective. It explores the changing national and international connections within China and between China and other parts of the world, and their importance for understanding the past, current, and future developments of the Chinese economy. The book brings together leading international

contributors from China, Japan and Europe to consider the historical developments of these connections, the importance of natural and man-made connections for the Chinese economy, the role of institutions and policies for understanding the connections and their sustainability. This book will be of interest to scholars and researchers focusing on China, economics, geography or international trade.

Press  
For more than a decade, Ryan Lilly helped over 1,000 entrepreneurs in 3 states achieve success. But along the way he encountered problems. Ryan quickly became frustrated that old-school economic development wasn't working. The new field of "entrepreneurial ecosystem building" was still so undefined. And most aggravating of all: Building a vibrant entrepreneur ecosystem was a painstakingly slow process where he was

constantly reinventing the wheel. Like the entrepreneurs he was helping, Ryan finally realized; "There has to be a better way!" Introducing; *Ecosystem Hacking*. Inside you'll learn:; An easy-to-remember framework (Seek, Synergize, Support, Streamline, Share); Real-life stories and examples (Some are seriously funny); Ideas you can take action on TODAY (See results faster!) *The Israeli Central Bank* Routledge Shows how to turn

globalization into opportunity--to grow new businesses, create new jobs, revitalize regions, and develop international cities of the future What's Changed and How You Can Help Lid Publishing Transactional lawyers are needed, en masse, to aid in an epic reinvention of our economic system. This reinvention is referred to by many names the "sharing economy," "collaborative consumption," the "grassroots economy" and involves different ways of

meeting people's needs, participating in production, and transacting with each other. This book illustrates the nine primary areas of work that a sharing lawyer must know, including drafting agreements, structuring entities, employment regulations, intellectual property, and much more. The work of a sharing lawyer will often be challenging, but will always be interesting and demand creativity. Perhaps best of all, the work of sharing lawyer will

contribute importantly to the creation of a world in which innumerable people have now decided they want to live."

*Local Economy* New

Society Publishers

Much of our

understanding of local

economic development is

based on large urban

agglomerations as nodes

of innovation and

competitive advantage,

connecting territories to

global value chains.

However, this framework

cannot so easily be

applied to peripheral

regions and secondary

cities in either the Global

South or the North. This

book proposes an

alternative way of looking

at local economic

development based on

the idea of fragile

governance and three

variables: associations

and networks; learning processes; and leadership and conflict management in six Latin American peripheral regions. The case studies illustrate the challenges of governance in small and intermediate cities in Latin America, and showcase strategies that are being used to achieve a more resilient and territorial vision of local economic development. This book will be of interest to students and researchers of local economic development, urban and regional studies, and

political economy in Latin America as well as to policy-makers and practitioners interested in local and regional economic development policy.

*Making Medicines in Africa*  
Routledge

This captivating story of the Jewish community in Johnstown, Pennsylvania reveals a pattern of adaptation to American life surprisingly different from that followed by Jewish immigrants to metropolitan areas. Although four-fifths of Jewish immigrants did

settle in major cities, another fifth created small-town communities like the one described here by Ewa Morawska. Rather than climbing up the mainstream education and occupational success ladder, the Jewish Johnstownners created in the local economy a tightly knit ethnic entrepreneurial niche and pursued within it their main life goals: achieving a satisfactory standard of living against the recurrent slumps in local mills and coal mines and enjoying the company of

their fellow congregants. Rather than secularizing and diversifying their communal life, as did Jewish immigrants to larger cities, they devoted their energies to creating and maintaining an inclusive, multipurpose religious congregation. Morawska begins with an extensive examination of Jewish life in the Eastern European regions from which most of Johnstown's immigrants came, tracing features of culture and social relations that they brought with them to America. After detailing

the process by which migration from Eastern Europe occurred, Morawska takes up the social organization of Johnstown, the place of Jews in that social order, the transformation of Jewish social life in the city, and relations between Jews and non-Jews. The resulting work will appeal simultaneously to students of American history, of American social life, of immigration, and of Jewish experience, as well as to the general reader interested in any of these topics.

*Invisible Factors in Local Economic Development*  
Princeton University Press  
In 1950, at least 70 percent of Montana's food was grown in Montana. Many states used to have robust local-food economies, but that has changed drastically around the country in recent decades. National-scale food businesses beat out community-oriented small and medium-sized operations, laying waste to the infrastructure that once supported thriving local-food economies. There is

rising interest in again making food a local affair. But jump-starting a locavore economy is a tricky business. To cut down the massive distances that the vast majority of food eaten in the United States travels before it reaches dinner plates, communities must work to nurture "a cascading effect" by which each piece of a local-food economy enables and then reinforces the others to create a robust, cost-effective network. Locavore U.S.A.

introduces readers to some brave, hard-working souls in western Montana who are building their own such network piece by piece. In the process they are uncovering a key way to transform our industrially dominated food system. The following ebook is taken from the book *Change Comes to Dinner. Estimating Tourism/recreation Linkages in a Local Economy for Regional Resource Management* Florida Boston Publishing Group

Reinventing economic development as if small business mattered In cities and towns across the nation, economic development is at a crossroads. A growing body of evidence has proven that its current cornerstone—incentives to attract and retain large, globally mobile businesses—is a dead end. Even those programs that focus on local business, through buy-local initiatives, for example, depend on ongoing support from government or

philanthropy. The entire practice of economic development has become ineffective and unaffordable and is in need of a makeover. The Local Economy Solution suggests an alternative approach in which states and cities nurture a new generation of special kinds of businesses that help local businesses grow. These cutting-edge companies, which Shuman calls “pollinator businesses,” are creating jobs and the conditions for future economic growth, and doing so in self-

financing ways. Pollinator businesses are especially important to communities that are struggling to lift themselves up in a period of economic austerity, when municipal budgets are being slashed. They also promote locally owned businesses that increase local self-reliance and evince high labor and environmental standards. The book includes nearly two dozen case studies of successful pollinator businesses that are creatively facilitating business and neighborhood

improvements, entrepreneurship, local purchasing, local investing, and profitable business partnerships. Examples include Main Street Genome (which provides invaluable data to improve local business performance), Supportland (which is developing a powerful loyalty card for local businesses), and Fledge (a business accelerator that finances itself through royalty payments). It also shows how the right kinds of public policy can

encourage the spread of pollinator businesses at virtually no cost.

Can cash transfers promote the local economy? A case study for Cambodia Oxford University Press

This book provides a thorough investigation of the local and global political and institutional processes that have led to the strengthening of the Israeli central bank within the context of the now predominant neoliberal regime. Using Israel as a case study to identify broader patterns around

the world, the authors examine the strengthening of central banks as a key dimension of the institutionalisation of the global regime.

*The Wealth of Communities and the Durable Future* Zed Books  
This volatile, emotional issue, inherent to Southwest Florida, crosses several fields of study. To create this case study, faculty and graduate students from International College (Naples, Florida), with the help of a local Ft. Myers News-Press reporter,

researched this expansive issue involving many organizations and businesses. This controversial topic encompassed all of Florida, but affected Southwest Florida tremendously. Due to the controversial nature of the issue and its effect on one community in particular, the authors decided to concentrate the case research on the City of Cape Coral and the local dock building industry. This study presents and analyzes the issue from differing sides.

Key players include: Cape Coral Construction Industry Association, Florida Department of Environmental Protection, Florida Marine Contractors Association, Florida Marine Industry, U.S. Army Corps of Engineers, U.S. Fish and Wildlife Conservation Commission, and Save the Manatee Club. The case study is excellent for the classroom as it is an

ongoing issue with a multitude of research opportunities. What Can be Learned from Fort Ord? : Hearing Before the Subcommittee on Government Efficiency, Financial Management and Intergovernmental Relations of the Committee on Government Reform, House of Representatives, One Hundred Seventh Congress, First Session, August 28, 2001 Simon

and Schuster  
The goal of this study is to provide a multiyear perspective on the nonprofit arts and the local economy, that can be used by local arts agencies, municipal leaders, arts organizations, funders, and others to demonstrate the positive economic impact of the arts on communities across the country.
