 George Borjas' well-received text blends coverage of traditional topics with modern theory and developments into a superb Labor Economics book. The Fourth Edition builds on the features and concepts that made the first three editions successful, updating and adding new content to keep the text on the cusp of recent events in the Labor Economics field. In addition, 4/e offers greater instructor support with a significant number of new end-of-chapter problems and a new test bank. Labor Economics continues to be the most concise book available on the subject, but despite its brevity, instructors will find that all key topics are covered. Borjas' integration of theory with facts

and coverage of latest research make his book one of the most popular at the middle and upper end of the market. The text stresses the ideas that labor economists use to understand how the labor market works.

This handbook provides a survey of the American welfare state. It offers an historical overview of U.S. social policy from the colonial era to the present, a discussion of available theoretical perspectives on it, an analysis of social programmes, and an overview of the U.S. welfare state's consequences for poverty, inequality, and citizenship.

The book studies transformations of European universities in the context of globalization and Europeanization, the questioning of the foundations of the «Golden Age» of the Keynesian welfare state, public sector reforms, demographic changes, the massification and diversification of higher education, and the emergence of knowledge economies. Such phenomena as academic entrepreneurialism and diversified channels of knowledge exchange in European universities are

linked to transformations of the state and changes in public sector services. The first, contextual part of the book studies the changing state/university relationships, and the second, empirically-informed part draws from several recent large-scale comparative European research projects.

This is a fascinating book. Higher Education Review The Baby Boom generation did much to drive the transformation of American higher education that occurred in the 1960s. That extraordinary impact has invited many to think about how succeeding generations have challenged and will continue to challenge the assumptions and practices of educational institutions. This volume explores the significance of this generational perspective through observations from a variety of practitioners and observers of higher education. With stances ranging from unbridled enthusiasm to measured skepticism about the significance of generational change, these authors are sure to provide new insights to any thoughtful reader. Michael S. McPherson, President, The Spencer Foundation, US Our industry is extremely people intensive, so that understanding generational differences may be more important for us than for other industries. This book carefully portrays

these generational differences and explores their implications for higher education. Catharine Bond Hill, President, Vassar College, US *Generational Shockwaves* is a must read for all of us in higher education who spend so much of our time working to enhance the educational and social success of our students as well as the scholarly and teaching success of our faculty. After reviewing this volume, no one can continue to support what too many in higher education still practice a one size fits all approach to the challenges we confront. Herman A. Berliner, Provost and Senior Vice President for Academic Affairs, Hofstra University, US This volume offers a sort of cultural seismography of higher education in the early 21st century. This is the most comprehensive and thoughtful treatment I have seen of an inexorable and tectonic trend that will challenge the status quo in profound and unprecedented ways. David W. Leslie, Chancellor Professor of Education Emeritus, The College of William & Mary, US This volume, part of the TIAA-CREF Institute Series on Higher Education, is based on a national conference convened by the Institute in November 2007. The generational issues that were the focus of the conference raise both risks and opportunities with the potential to profoundly affect our cultural environment, both inside and outside academe. Baby Boomers, in their roles as students, parents, professors and administrators, transformed the American higher education system. As Boomers near retirement, Generation X and the Millennials are building on those contributions and making their own impacts. This volume sheds light on a current front-burner issue in higher education: managing the melding of generations, each with its unique needs and approaches to teaching and learning. The result of discussions among presidents, provosts, and other senior-level leaders from the higher education community, as well as the scholarship of leading academics, this lucid and engaging volume addresses intergenerational shifts and their wide-ranging implications for higher education including relevant risks and opportunities for consideration by campus leaders. The type of institution represented in these discussions ranges from small teaching-focused institutions to community colleges and large comprehensive research institutions. The authors offer senior leadership a deeper understanding of these generational challenges and opportunities and provide them with new and actionable information to enhance decision-making and inform strategic planning. They offer scholars new research questions to examine and provide insights to enhance effective reporting on higher education issues. Higher education presidents, chancellors, provosts, CFOs, faculty, researchers and policymakers will find this volume to be of significant value.

Rosen and Gayer's Public Finance provides the economic tools necessary to analyze government expenditure and tax policies and, along the way, takes students to the frontiers of current research and policy. While the information presented is cutting edge and reflects the work of economists currently active in the field, the approach makes the text accessible to undergraduates whose only prior exposure to economics is at the introductory level. The authors' years of policy experience have convinced them that modern public finance provides a practical and invaluable framework for thinking about policy issues. The goal is simple: to emphasize the links between sound economics and the analysis of real-world policy problems. Enhancements and key features for this new Global Edition include: New Policy Perspectives introduce relevant and engaging examples of international policy so students can extend their understanding of theory to policymaking across the globe. New Empirical Evidence applications provide students with real-world examples that are relevant to them, from case studies about Sweden and China to global examples that compare experiences between countries. Updated end-of-chapter questions broaden critical thinking, encouraging students to apply their knowledge to international and comparative examples. The results of econometric models are used to help students understand how expenditure and tax policies affect individual behavior and how governments set policies. Integrated theory and analysis: Institutional, theoretical, and empirical material is interwoven to provide students with a clear and coherent view of how government spending and taxation relate to economic theory. Current research is presented alongside discussion of methodological and substantive controversies. The approach is modern, theoretical, and empirical, and shared by most active economists. Institutional and legal settings are described in detail, and the links between economic analysis and current political issues are emphasized. This Global Edition has been adapted to meet the needs of courses outside of the United States and does not align with the instructor and student resources available with the US edition.

The work investigates the impact of religiosity of women and men on their completed fertility in an international comparison considering a long time period. Sandra Hubert aims at uncovering all

mechanisms through which religiosity and religious institutions can affect fertility. Hence, both the micro- and the macro-level of each country are explicitly integrated, and theoretically as well as empirically dealt with. The selection of differing countries rests upon the expectation that religiosity influences fertility decisions independently of the institutional context, social norms, state church-relations, and the national degree of religious vitality. These factors are intensively compared with each other at the country level. At the micro-level the impact of religiosity on fertility is tested by means of regressions and based on the Generations and Gender Survey. Results depend on gender, country, the diverse religious affiliations, and more.

Changes in the area of employment discrimination law, since publication of earlier editions of this book, have refined many of the substantive doctrines and continued to clarify procedural issues. A number of relevant decisions have explored the scope of protection provided by the ADA, while others have focused on the extent to which Title VII proscribes sexually harassing behavior. The new Seventh Edition of *Employment Discrimination Law: Cases and Materials* includes updated note material to include analyses and recent studies of labor market discrimination as well as cover recent judicial developments and the following main decisions issued since the Sixth Edition was published in 2006: Ricci v. DeStefano (Sup. Ct. 2009) concerning the right of an employer to postpone promotions based upon test results having a disparate impact and Lewis v. City of Chicago (Sup. Ct. 2010) dealing with the timeliness of challenges to the use of previously administered test scores which have a disparate impact on protected groups. Ledbetter v. Goodyear Tire & Rubber Co. (Sup. Ct. 2007) pertaining to the timeliness of challenges to gender-based pay differentials and the 2009 Lilly Ledbetter Fair Pay Act reversing the impact of the prior Supreme Court decision. In re Union Pacific RR Employment Practices Litigation (8th Cir. 2007) regarding the duty of employers to cover the cost of prescription contraceptives under the Pregnancy Discrimination Act amendments. Crawford v. Metropolitan Government of Nashville (Sup. Ct. 2009) and Thompson v. North American Stainless (Sup. Ct. 2011) both dealing with the scope of the Title VII anti-retaliation proscription. This book also is available in a three-hole punched, alternative loose-leaf version printed on 8.5 x 11 inch paper with wider margins and with the same pagination as the hardbound book.

"One benefit of authoring a text that has met the test of the market is the opportunity to revise. Revision provides for improvement-to delete the archaic and install the novel, to rectify errors of omission or commission, to rewrite misleading or obscure statements, to introduce more relevant illustrations, to bring more recent data to bear, to upgrade organizational structure, and to enhance pedagogical aids-in short, to build on an accepted framework of ideas. We feel that those who examine this new twelfth edition of *Contemporary Labor Economics* will agree that we have fully exploited this opportunity"--

Gender equality is a core development objective in its own right and also smart development policy and business practice. No society can develop sustainably without giving men and women equal power to shape their own lives and contribute to their families, communities, and countries. And yet, critical gender gaps continue to exist in all countries and across multiple dimensions. The gender module of the World Bank's ADePT software platform produces a comprehensive set of tables and graphs using household surveys to help diagnose and analyze the prevailing gender inequalities at the country level and over time. This book provides a step-by-step guide to the use of the ADePT software and an introduction to its basic economic concepts and econometric methods. The module is organized around the framework proposed by the World Development Report 2012: Gender Equality and Development. It covers gender differences in outcomes in three primary dimensions of gender equality: human capital (or endowments), economic opportunities,

and voice and agency. Particular focus is given to the analysis and decomposition techniques that allow for further exploring of gender gaps in economic opportunities.

This volume explores the various issues that have an impact on the academic career of professionals in European higher education. Higher Education Institutions (HEIs) are currently subject to profound uncertainties and are more challenged than ever on quality issues, both with regard to their conceptual nature and in the extension and amendment of their mission. Divided into three parts, the first part of the book deals with the challenges and issues in higher education academic careers. It addresses such topics as the influence of European policies and changes, the cultural differences in the preferences of academics for teaching or research, the increasing inequality in working conditions for academics, and the changing nature of academic strategy in the transformational world of higher education with its implications for academic structures, work and careers. The second part of the book analyses the findings of a national study on satisfaction of academics in Portuguese higher education, carried out at the Centre for Research on Higher Education Policies (CIPES). The third part offers a comparative analysis of a number of national European case studies, focusing on the changing relevance of and increasing expectations around academic careers. The concluding chapter discusses whether the academic profession is merely an artificial term that has to do with a heterogeneous range of occupations, or if there are important common elements of the academic profession across European Higher Education systems.

Medicare is the largest health insurer in the United States, providing coverage for 39 million people aged 65 and older and 8 million people with disabilities, and reaching more than an estimated \$500 billion in payments in 2010. Although Medicare is a national program, it adjusts fee-for-service payments according to the geographic location of a practice. While there is widespread agreement about the importance of providing accurate payments to providers, there is disagreement about how best to adjust payment based on geographic location. At the request of Congress and the Department of Health and Human Services (HHS), the Institute of Medicine (IOM) examined ways to improve the accuracy of data sources and methods used for making the geographic adjustments to payments. The IOM recommends an integrated approach that includes moving to a single source of wage and benefits data; changing to one set of payment areas; and expanding the range of occupations included in the index calculations. The first of two reports, *Geographic Adjustment in Medicare Payment: Phase I: Improving Accuracy*, assesses existing practices in regards to accuracy, criteria consistency, evidence for adjustment, sound rationale, transparency, and separate policy adjustments to reform the current payment system. Adopting the recommendations outlined in this report will mean a change in the way that the indexes are calculated, and will require a combination of legislative, rule-making, and administrative actions, as well as a period of public comment. *Geographic Adjustment in Medicare Payment* will inform the work of government agencies such as HHS, the Centers for Medicare and Medicaid Services, congressional members and staff, the health care industry, national professional organizations and state medical and nursing societies, and Medicare advocacy groups.

"Usable Social Science represents a remarkable collaboration between Neil J. Smelser, one of

America's most distinguished sociologists, and John Reed, a highly successful member of corporate America. Together, they accomplish an even more remarkable feat of making accumulated social science knowledge accessible to non-academics while, at the same time, making an academic contribution to the social sciences by reviewing the history, accumulated findings, and conceptual approaches in key areas of specialization in sociology and elsewhere in the social sciences."—Jonathan H. Turner, University Professor & Distinguished Professor of Sociology, University of California, Riverside. "This book is an ambitious project to provide the public with a review of the available and practicable knowledge for decision-making people (and who is not that

today?) that the social sciences have produced over the last 250 years or so. Typically, such efforts are bound to fail. But this project is a full success, keeping its promise to present knowledge in an understandable and exciting way. The language is charming and the elegant prose is the product of a fluent, transparent style. In short: a must read!"—Hans-Peter Mueller, Professor of sociology, Humboldt-University of Berlin.

eBook: Economics 20th Edition W.E. Upjohn Institute

This research discusses the relationship between the migration of skilled professional and managerial workers from Canada to the United States, the so-called "brain drain", and seeks to

determine if and how the Canada-U.S. Free Trade Agreement (FTA) and the North American Free Trade Agreement (NAFTA) may have affected bilateral flows of permanent and non-permanent immigrants between the two countries. Classical economic theory suggests that trade and factor movements are substitutes, so that freer trade between Canada and the United States could be expected to reduce incentives for bilateral migration. On the other hand, the labor demands of multinational corporations in the emerging global marketplace require a greater degree of worker mobility than has heretofore existed. The research reviews available historic and longitudinal evidence related to political, social and economic effects of the FTA and the NAFTA.
